### Abstract

We have adopted a novel approach to starting a new journal that differs from conventional ones in a number of significant aspects. Dedicated to multidisciplinary research, IJOMAHIP promotes innovation, global knowledge exchange, and collaboration among researchers, clinicians, educators, healthcare practitioners, and policymakers in the medical and allied health sciences through timely peer review and open access.

Together with the other journals affiliated with the Virtual Realia Organization, we are starting an exciting journey to transform the publishing landscape of medical and allied health sciences with the launch of the International Journal of Medicine and Allied Health Innovations Perspectives (IJOMAHIP). Our goal is to position IJOMAHIP as a premier platform that encourages innovation and cooperation within the international medical community in addition to disseminating state-of-the-art research. By adopting an innovative approach, we diverge from traditional journals through our commitment to interdisciplinary research, open access, and rapid peer review, ensuring that our publication remains at the forefront of medical and health sciences advancements.

Our objective is to increase understanding in the domains of health sciences and medicine by encouraging creativity, promoting international information sharing, and aiding in the joint endeavors of researchers everywhere. Our goal is to establish a forum where many stakeholders may exchange their work, advance knowledge, and work together to address urgent healthcare issues.

IJOMAHIP publishes innovative research in a variety of medical and health disciplines. Basic Medical Sciences, Clinical Laboratory Science, Clinical Medicine, Health Care Policies, One Health and Global Health, Nursing, Public Health, Pharmaceutical, Rehabilitation, and Translational

Sciences are just a few of the areas that fall under our purview. Furthermore, we support multidisciplinary research that tackles current healthcare issues, demonstrating our dedication to all-encompassing and holistic healthcare solutions.

We at IJOMAHIP are dedicated to upholding the strictest guidelines for ethical publishing and scientific rigor. Only submissions' scientific validity is taken into consideration while making editing choices. A scientifically solid research question, appropriate methodology and analysis, and adherence to community-agreed standards pertinent to the research field are all part of this for research publications. We ensure that all published content is supported by strong scientific evidence by not basing editorial decisions on a study's potential impact or level of interest.

Our double-blind peer review procedure guarantees the anonymity of both authors and reviewers during the assessment process. We look for the professional assistance of highly published scholars in the relevant domains worldwide. In addition to other pertinent ethical norms that apply to medicine and health science research, we follow the guidelines established by the Committee on Publication Ethics (COPE).

Adopting an open-access paradigm improves accessibility and collaboration globally by guaranteeing that every published work is freely accessible to users everywhere. Our objective is to

establish a platform where researchers, doctors, and educators can exchange their work, improve knowledge, and work together to address urgent healthcare issues.

We extend an invitation to researchers, clinicians, educators, healthcare professionals, and policymakers worldwide to participate in this fascinating project. Let us work together to push the boundaries of medicine and health sciences with creative research, cooperative discussion, and a dedication to quality.

On our website and social media pages, you may find information about upcoming issues, editorial policies, and submission procedures. Your input and involvement in influencing the direction of publishing in the medical and health sciences are much anticipated.

Chief Editor, *International Journal of Medicine and Health Innovations Perspectives*

## About the Author

Edsel P. Inocian, LPT, RMT, MPH, PhD is the Research Technical Chair at Cebu City Medical Center and Research Council Chair Southwestern University Medical Center, Philippines. He serves as the Research Director of the Matias H. Aznar Memorial College of Medicine and MHAM College.

He is also a Research Professor in the Graduate Schools of Allied Health Sciences at the University of the Visayas, as well as in Teacher Education at Cebu Normal University. He held the position of Dean of Medical Technology at the University of Cebu in the Philippines. His research focuses on Medical Technology, Public Health, and Education, employing diverse methodological approaches. His dissertation explores the translation of research knowledge from academia to the healthcare industry, emphasizing practical applications of theoretical research. Edsel is an active member of several professional organizations, including those for medical technologists and educational institutions. He participates in quality assessment initiatives with the Commission on Higher Education. In January 2025, he joined as the pioneer Chief Editor of the International Journal of Medicine and Health Innovations Perspectives (IJOMAHIP), further highlighting his commitment to advancing research and education in healthcare.
